OVERVIEW

What is BuyerPulse?

BuyerPulse is an internal auction operations dashboard for buyer success teams managing large dealer portfolios in vehicle auction platforms. It consolidates buyer health monitoring, risk management, follow-up task tracking, analytics, and AI-generated summaries into a single interface.

PROBLEM STATEMENT

| Why BuyerPulse?

Auction operations teams managing hundreds of active dealer-buyers face compounding, disconnected problems that slow down proactive management.

Platform Modules

Eight interconnected modules — each solving a discrete ops workflow.

MODULE 01

Dashboard

Live KPI stat cards, portfolio health bar, auction status, pending follow-ups, and quick action buttons. Morning briefing at a glance.

MODULE 02

Buyers

Paginated buyer roster with live search, risk filter pills, and a slide-in detail drawer with 5 tabs: Details, Activity, Follow Ups, Payments, Notes.

MODULE 03

Health Scores

Portfolio-wide health scoring — score distribution histogram, portfolio snapshot, individual buyer health cards with gauge and filter row.

MODULE 04

Risk Center

Triage view for flagged buyers. Risk feed cards with reason, EMD exposure, and action buttons: Contact, Suspend, Resolve. Bulk resolve for Critical tier.

MODULE 05

Follow Ups

Three-column kanban (To Do → In Progress → Done). Task cards with type, priority, due date, and assignee. Add Follow Up modal with full form.

MODULE 06

Notifications

Bell dropdown with unread badge, tabbed notification page (All / Unread / Alerts / Updates), Mark All Read, and View All actions.

MODULE 07

Analytics

Pure CSS/SVG charts — health trend line chart, risk distribution donut, auction activity bar chart, and top buyers table. 7D / 30D / 90D date filter.

MODULE 08

AI Insights

AI-generated operational summaries with thinking overlay animation, character-by-character typing effect, expand/collapse cards, and 3-variant rotation.

Buyers & Detail Drawer

The buyers module is the operational core — search, filter, and drill into any dealer's full profile in seconds.

Buyer Table

COLUMN	DESCRIPTION	DATA TYPE
Buyer Name	Dealer / company name and city	string
Status	Active · Inactive · Watchlist · Suspended	enum
Health Score	0–100 score with colour-coded badge (green / amber / red)	number
EMD Balance	Earnest Money Deposit in ₹, formatted to lakhs	number
Last Active	Relative time — "Today", "3 days ago", "2 weeks ago"	date
Risk Level	Low · Medium · High · Critical	enum

Detail Drawer Tabs

TAB	CONTENT
Details	Email, phone, account manager, member since, total bids, auctions won, win rate, current status
Activity	Chronological bid history — lot number, auction name, bid amount (₹), date, result (Won / Lost / Outbid / Withdrawn)
Follow Ups	Timeline of calls, emails, meetings, and notes — type icon, description, assigned manager, date
Payments	Invoice table — invoice ID, amount, due date, status badge (Paid / Pending / Overdue / Partially Paid)
Notes	Free-text account notes with author attribution and date

Sample Buyer Portfolio

BUYER	CITY	SCORE	EMD	RISK	STATUS
Agarwal Auto Traders	Bhopal	93	₹5.0L	Low	Active
Balaji Vehicle Traders	Hyderabad	91	₹4.0L	Low	Active
Kerala Auto Exchange	Kochi	89	₹4.5L	Low	Active
Shriram Automall India	Mumbai	88	₹2.5L	Low	Active
Mahindra First Choice	Delhi	74	₹1.25L	Medium	Active
Vinayak Motors Pvt. Ltd.	Bangalore	44	₹50K	High	Watchlist
Priya Logistics Pvt.	Kolkata	38	₹25K	Critical	Watchlist
Patel Motors & Auctions	Vadodara	22	₹0	Critical	Suspended

AI Insights

A simulated AI operations layer — typing animation, thinking overlay, and structured summaries — that communicates the intended product experience in demos without a live model.

How It Works

STEP	WHAT HAPPENS
1. Generate	User clicks "Generate Summary". The button disables and the thinking overlay activates.
2. Thinking	Animated three-dot loader with "Analyzing portfolio data..." label plays for 1.8 seconds.
3. Render	Six insight cards slide in one by one, each starting the typing animation immediately.
4. Typing	Text types character-by-character at ~11ms per char, with longer pauses at punctuation (55ms at ".", 28ms at ",").
5. Expand / Collapse	Each card has a toggle to show full detail or collapse to a one-line summary.
6. Variants	Three summary variants rotate on each generation for demo freshness.

Summary Cards

Portfolio Health
Overall health trend, declining buyers, recommended interventions.

Risk Alerts
Critical buyer count, total EMD exposure, escalation recommendations.

EMD Intelligence
Top depositors, at-risk balances, suggested top-up nudges.

Auction Performance
Win rates by buyer tier, high-activity buyers, bid coaching opportunities.

Engagement Insights
Inactive buyer list, follow-up backlog, outreach recommendations.

Weekly Forecast
Predicted auction activity, expected risk movements for next 7 days.

| AI as UX Metaphor

The AI Insights page is not connected to any language model. The typing animation and thinking overlay create the *feel* of AI reasoning — communicating product intent and user experience in a demo context without requiring infrastructure. This is a deliberate prototyping technique: the interaction design validates the concept independently of the ML layer.

UI & Design Language

A full design system in CSS custom properties — light mode, consistent elevation, and purposeful motion.

Colour Tokens

TOKEN	VALUE	USAGE
 <code>--color-primary</code>	#4F63E8	Buttons, active states, links, chart bars
 <code>--bg-base</code>	#EEF0FA	Page background
 <code>--bg-surface</code>	#FFFFFF	Cards, drawers, modals
 <code>--bg-elevated</code>	#F4F5FC	Table headers, secondary panels
 <code>--text-primary</code>	#0F172A	Headings, body copy
 <code>--text-secondary</code>	#475569	Labels, sub-text
 <code>--text-muted</code>	#94A3B8	Placeholders, timestamps
 <code>--color-success</code>	#16A34A	Healthy scores, positive deltas, Low risk
 <code>--color-danger</code>	#DC2626	Critical risk, overdue, suspended status
 <code>--color-warning</code>	#D97706	Medium risk, due-soon, warning states

Typography

ELEMENT	FONT	WEIGHT	SIZE
Page Titles	Inter	600	1.5–1.8rem
Section Labels	Inter	600	0.7rem, uppercase, 0.2em spacing
Body / Descriptions	Inter	300–400	0.85–0.9rem
Stat Card Values	Inter	700	1.6–2rem
Meta / Timestamps	Inter	300	0.75rem

Motion & Interaction

PATTERN	IMPLEMENTATION
Ripple effect	Pointer-down → appended <code></code> with <code>@keyframes ripplePop</code>
Card hover lift	<code>box-shadow</code> transition on <code>:hover</code> , 200ms ease
Page transitions	<code>opacity + translateY</code> fade-in on page switch via <code>@keyframes pageEnter</code>
Drawer slide-in	<code>translateX(100%) → translateX(0)</code> with overlay backdrop
AI typing	Async character loop, 11ms base delay, 55ms at ".", 28ms at ","
AI thinking dots	<code>@keyframes aiDotPulse</code> — staggered scale pulses on three spans
Skeleton shimmer	<code>@keyframes shimmer</code> — <code>background-position</code> scroll on gradient

Architecture & Deployment

Zero dependencies. Instantly deployable. Entirely self-contained in three files.

File Structure

FILE	SIZE (APPROX)	RESPONSIBILITY
index.html	~670 lines	All page sections, drawer, kanban, modal markup. Semantic HTML with ARIA attributes.
style.css	~2,900 lines	Full design system. CSS custom properties, animations, responsive breakpoints, dark/light theming.
script.js	~2,770 lines	All logic, mock data, page renderers, AI generation, ripple, pagination, search, kanban.

script.js Module Map

FUNCTION / SECTION	RESPONSIBILITY
MOCK_BUYERS[]	25 buyer records — Indian dealer names, cities, scores, EMD, risk levels
getBuyerExtended(buyer)	Derives contact, bids, follow-ups, payments, notes from buyer.id deterministically
openDrawer() / closeDrawer()	Slide-in drawer lifecycle — aria, scroll lock, row highlight
renderDetailsTab() etc.	Five tab renderers returning HTML strings
initBuyersPage()	Table render, live search (debounced), risk filter, pagination
initHealthPage()	Health score cards, distribution histogram, portfolio snapshot
initRiskPage()	Risk feed with severity filter and resolve/contact/suspend actions
initFollowUps()	Kanban board, card move, Add Follow Up modal with form validation
initNotifications()	Bell dropdown, notification page tabs, mark-read, unread badge
initAnalytics()	KPI cards, SVG charts (line, donut, bar), date-period switcher

FUNCTION / SECTION	RESPONSIBILITY
<code>generateAISummaries()</code>	Thinking overlay, card slide-in, async typing animation, variant rotation
<code>initRipple()</code>	Global pointer-down ripple effect — excludes icon-btn to protect notification badge
<code>renderStats()</code>	Dashboard KPI stat cards with delta indicators

| Design Principles

PRINCIPLE	IMPLEMENTATION
No framework	Plain HTML/CSS/JS — zero build step, instant GitHub Pages deploy, shareable as a link
Deterministic data	All extended data derives from <code>buyer.id</code> via modular arithmetic — no <code>Math.random()</code> in data generation
CSS variables	All colours, shadows, spacing in <code>:root</code> — enables full theming with a single class swap
Accessible markup	ARIA roles, aria-hidden, aria-expanded, aria-modal on drawers and dropdowns
No inline style mutations	Ripple clipping via CSS <code>overflow: hidden</code> , not JS, preventing permanent side-effects

| Deployment

Published via GitHub Pages on the **avithehacker/PM** repository. Listed in `drafts.html` under the First Draft prototypes section.
